ADVERTISEMENT

TO THE READER.

THE Compiler of the following sheets was induced to undertake the task, to avoid the constant trouble he was at in transcribing single Receipts for one or other of his friends. He thought it might be more useful to make a small cheap selection of Receipts most generally needful; he has endeavoured to select such as are simple in their composition and effectual for the purposes intended; and as he is no friend to blindly following printed or written forms, he has generally chosen such as will admit of easy modification, according to the existing circumstances. He has printed it in a size proper to bind up as a pocket-book, or in any other way suitable to the possessor;—he has

iv ADVERTISEMENT to the READER.

not made any animadversions on the Receipts as they go on, because he wishes to leave them to every man's own judgment; but has thought fit to add some General Observations on the composition and probable effect of the different medicines. He has likewise added an Index, that every class may be readily recurred to, and if the publication is received by the great body of the persons, for whose use it is intended, half so favourably as it has been by his particular friends, the Compiler will be amply repaid for his trouble.

A MANUAL, &c.

PURGING BALLS.

1. 1. **B**EST Barbadoes Aloes one ounce.
Powder of Jalap two drams.

Powder of Cream of Tartar two drams.

Powder of Ginger two drams.

Mix them and give in a pint of warm Ale.

59. 17 Onions cut very small, four ounces.

Strong Beer one quart. (hours.

Give one half warm and repeat in fix

60. 18. Garlic one ounce.

Venice Treacle two ounces.

Mix them well in a Mortar, then add,

White Wine one pint.

Give it cold,

Aniseeds

261. 19. Aniseeds bruised half a pound.

Boil them in a quart of Ale, a few
Minutes, then dissolve half a
pound of Honey in it, and give
it blood warm, feeds and all.

262. 20. Barbadoes Tar two ounces.

Cold drawn Linseed Oil half a pint.

Water Gruel one pint.

MIX.

263. 21. Powder of Bay Berries one ounce.

Powder of Grains of Paradise half an ounce.

Powder of Nitre two ounces. (ounce

Oil of Turpentine half an ounce.

Mild Ale one quart.

MIX.

264. 22. Controyerva Root bruised one ounce

Snake Root bruised one ounce.

Liquorice Root sliced one ounce.

Saffron two drams.

Infuse for two hours, in two quart
of boiling water then strain and
add distilled Vinegar four ounce

Give one pint every six hours.

Camph

55. 23. Camphor in Powder one dram.
 Distilled Vinegar (warm) half a pint.
 Mix and give every fix hours.
56. 24. Valerian Root bruised two ounces.
 Snake Root bruised one ounce.
 Infuse in one quart of boiling water
 till cold, then add Liquid Lau-
 danum half an ounce.
 Mix and give one half and repeat in
 fix hours.

EMBRICATIONS.

67. 1. Common Oil of Amber two ounces.
 Opodeldoc fix ounces.
 Spirit of Sal Armoniac two ounces.
 Barbadoes Tar two ounces.
68. 2. Common Oil of Amber one ounce.
 Oil of Vitriol two ounces.
 Oil of Turpentine two ounces.
 Common Linseed Oil twelve ounces.
- Mix

Mix the two last together, in a pipkin,
then with a stick, stir in the Oil
of Vitriol very gradually : after-
wards add the other.

MIX.

269. 3. Oil of Turpentine four ounces.
Oil of Bays four ounces.
Palm Oil two ounces.

MIX.

270. 4. Spirit of Wine and Camphor four ounces
Spirit of Sal Armoniac two ounces.
Spirit of Turpentine two ounces.

CONSUMPTIONS.

271. 1. Gum Assafoetida four ounces.
Gum Ammoniac four ounces.
Gum Styrax (strained) four ounces.
Fresh Squills four ounces. (ounces
Cinnabar of Antimony (levigated) two
Honey sufficient to make a Mass.

Cinaba

72. 2. Powder of Nitre four ounces.
 Powder of Gum Guaicum four ounces.
 Cinnabar of Antimony (levigated) four
 ounces.
 Powder of Grains of Paradise two ounces.
 Honey sufficient to make a Mass.
73. 3. Conserve of Hips half a pound.
 Locatelli's Balsam half a pound.
 Powder of Bayberries four ounces.
 Flower of Sulphur four ounces.
 Treacle sufficient to make a Mass.
74. 4. Garlic half a pound.
 Powder of Fenugreek Seeds half a pound.
 Powder of Grains of Paradise two ounces.
 Honey sufficient to make a Mass.

FOR A SORE THROAT.

75. 1. Camphor in Powder two drams.
 Opium in Powder half a dram.

M

Venice

Venice Treacle one ounce and a half.
 Mix into a Pall.

276. 2. Powder of Sal Polychrest one ounce.
 Powder of Jalap six drams. (ounce.
 Powder of Fenugreek Seeds half an
 Common Treacle sufficient to make a
 Ball.

FOR WORMS.

277. 1. Barbadoes Aloes three ounces.
 Calomel (levigated) one ounce.
 Powder of Ginger one ounce.
 Oil of Aniseeds three drams.
 Treacle sufficient to make four Balls.
 One to be given every other Night,
278. 2. Levigated Antimony half a pound.
 Æthiop's Mineral four ounces.
 Powder of Aniseeds half a pound.
 Honey sufficient to make eight Balls.
 One to be given every Night.

Powder

279. 3. Powder of Tin one ounce.
 Æthiops Mineral half an ounce.
 Powder of Aniseeds half an ounce.
 Honey sufficient to make a Ball.
280. 4. Calomel (levigated) half an ounce.
 Powder of Tin two ounces.
 Powder of Diapente ten ounces.
 Common Oil of Amber one ounce.
 Oil of Savin two drams.
 Treacle sufficient to make eight Balls.

Handwritten text, likely a list or index, with several lines of cursive script. The text is mostly illegible due to fading and bleed-through from the reverse side. Some words are faintly visible, such as "Henry" and "John".

Handwritten text at the bottom of the page, continuing the list or index. The script is cursive and mostly illegible.

GENERAL OBSERVATIONS.

I thought a few General Observations upon the method of compounding and probable effects of the foregoing remedies would be acceptable, and for that purpose have prefixed two columns of figures; the first contains the number of Receipts progressively from the first to the last—the second column contains the numbers of the receipts under each particular head—it is the first column I shall here make use of. I have not made use of any figures in the Receipts themselves, for fear of errors in quantity.

The first fourteen numbers are varieties of Purging Balls, No. 1, is most generally useful, which is principally the case throughout; the three next are Com-

mon Purges :—No. 5 and 9, are Stomachic Purges fit for very tender horses or after a severe fit of illness; the rest are Physic of different strengths—No. 12, is very powerful.—No. 13 and 14 are for Horses at Grass. I have directed all these Balls to be beat up in a Mortar, but several of them may be made by melting the Aloes in a Ladle with a small quantity of Spirits, and then stirring in the other Ingredients; but I prefer the former method.

The next twelve are Cordial Balls.—No. 15, is Dr. Bracken's, a composition which, for general purposes, cannot be excelled :—the rest are Compounds which are intended to answer the same end, with some little deviation; the last No. 26, is the least judicious.

For Diuretic Balls there are twelve Receipts. No. 27, is a good Composition.

No.

No. 28, will not keep long on account of the Diuretic Salt — No. 35, 36, and 37, are very strong. The Dose of Diuretic and Cordial Balls is generally two unces.

No. 39, 40, and 41, are Mercurial Balls frequently given in the Farcy, Mange, and other obstinate Disorders of the Juices, they are powerful remedies, and great care must be taken of the horse, during their operation; he must have warm Water or Watergruel, and must be warmly cloathed.—No. 39, is the mildest. No. 41, is a very strong Purge.

The next ten numbers are for Fevers, No. 42, is a very good Ball, and given after Bleeding, &c. in inflammatory Fevers, and violent Colds will seldom fail being of great service, accompanied with Mashies; the next five are good

good Medicines, intended for the same use—The remaining four are warm Medicines, proper for Putrid Disorders, and should be accompanied with Bark, Red Wine, &c. they should be given about every six hours.

Then follow Balls for that troublesome Disorder the Grease.—No. 54, is far the best, but as these Medicines must be given a considerable time, it is too expensive for ordinary Cattle—a Ball of any of them should be given Night and Morning for three Weeks or a Month.

No. 56, is a Ball commonly given to Hunters every Night for three Weeks, or a Month, before the season commences, in order to strength their Wind.

No. 57, 58, 59, are Alterative Balls, proper to be given when Horses are changing their coats, or when they are troubled with any little eruptions. They should
be

be given Night and Morning for some time. Balls are much the best method of giving these medicines, as in giving them in Powder, mixt with the Feed, there is a great deal wasted.

There are ten Receipts for Blisters, all of which are useful, and may be selected according to their strength, and the purposes they are intended to answer.

Poultices, which come next, may be divided into two classes, Drawing and Repellent; No. 70, 71, 72, 73, 74, 75, are of the former description, 76 and 77, of the latter—No. 73, though very troublesome to compound, is an excellent emollient and ripening Poultice.

Mixt Oils are used for Strains, Bruises, &c. externally, they should be well rub'd on the part hurt, three or four times a day.

Of the Heel Ointments, No. 86, is emollient and healing, so is No. 92, the rest are all drying, 90 and 93, powerfully so.

No. 96 and 97, are very useful Ointments when Horses Hoofs become dry and crack; they should be well rub'd in every day.

The Ointments which follow are intended for Wounds, Sores, &c. No. 98, is very generally useful, as cleansing and healing; 105, 106, 108, are gently drawing; 107 is very drying, and 109, is useful when Fungus or Proud-flesh appears.

Sharp Waters are useful in the first appearance of the Grease or Humours about the Heels or Fetlocks; they should be wash'd with them two or three times a day; No. 111 is far the strongest.

The Mange is a very troublesome Disorder, and requires a great deal of care and attention to cure it; some of these Ointments must be used every day, and the Alterative Balls, No. 57, should be given every night.

No. 118, is an emollient Clyster, proper to be administered when a Horse is bound in his Body; the next is for the same intention, but it is much warmer, so are No. 121, and 122, the last is very purgative.—No. 120, is a powerful astringent one, to be given in Scourings and great weakness of the Intestines.—No. 123, is merely nutritive and intended to support a Horse some little time, when by reason of a Lock'd Jaw, or other Disorders, he cannot take his Food.

The Farcy is a very difficult Disorder to cure, and requires constant care and attention, as well as Medicines both internal and external.—No. 124, is a Diet Drink for purifying the Blood and Juices, and should be persevered in for a Month or longer.—No. 125, and 128, are compositions to dress the Buds,

the rest are internal Remedies, and should be given daily.

The Receipts for Spavins, Splents, &c. are all Caustics, and must be used discretionally according to their different strengths.

No. 138, for a Sand-crack, must be used immediately after mixing, by filling the Crack with it; it requires no farther trouble.

The Balls which follow, are very good Remedies in old obstinate Coughs, particularly in 139. There must a Ball be given every night and morning for some time.—The Drinks have their Directions annexed.

No. 144, is an astringent Fomentation for Windgalls, and the next is a Charge, to be applied when the swelling has subsided.

The

The Mixtures for Strains, are to be rub'd in with the hand, on the part affected three or four times a day.

Eye Waters are very useful in Colds and Inflammations of the Eyes, to which Horses are very subject. No. 154, 156, 157, are very mild ; No. 155 is sharp, and must be used when there is a great defluxion.

The Balls for Surfeits are excellent Medicines, not only in that Disorder, but in all eruptions and foulness of the Skin, No. 160 is particularly so.

The Gripes is a Disorder which requires speedy Relief, all the Medicines for it are warm and carminative. No. 165, 166, generally relieves in half an hour.

The Ointment for the Mallenders are merely to be rubbed upon them twice a day.

Diabetes,

Diabetes, or immoderate Staling and Pissing Blood, are very dangerous Disorders, and must be checked as soon as possible. No. 171 and 172, are mild balsamic Medicines. No. 173, is a powerful astringent, and must be used with great caution.

No. 174, is to be rubbed well on the Hoofs Night and Morning.

Alteratives are a very useful class of Medicines to Horses kept in Stables, they should be given every Spring and Autumn for a Fortnight or three Weeks one table-spoonful in their Feeds every Night.—No. 176, is an excellent Medicine.

The Glanders is a Disorder seldom curable, I never knew but one Horse cured of a confirmed Glanders, and that was by a two years daily perseverance

ance in administering Medicine, a trouble few Persons will submit to. No. 183 is far the best Remedy.

The Staggers are seldom fatal, if taken in time, they are somewhat analogous to the apoplexy in Men; Bleeding should always precede the exhibition of any Medicine.

The next six Receipts are for Broken Wind, but I must observe it is a Disease seldom cured—No. 192, 193, 194, 195, are very good Balsamic Medicines, and will do whatever can be done in this complaint.

The Yellows or Jaundice, is a common and very troublesome Disorder among Horses. They should have gentle exercise, and a Ball should be given Night and Morning, No. 204, 205, 206, are the best Remedies.

Stran-

Stranguary is a very troublesome and dangerous Complaint; the common Diuretic Medicines are too harsh and violent, the Recèits here given are mild and aperient. In this Disease the Horse should have plenty of thick Watergruel.

The Pectoral Balls which follow, if given in time, will prevent a Horse becoming Broken Winded; No. 214, 215, are excellent Remedies.

After a Horse has been over-purged, or has a scouring brought on by green Meat, &c. the Restraining Balls are extremely serviceable, but you must take care not to continue them longer than absolutely necessary, for fear of producing a worse Disorder than they are intended to cure.

When a Horse loaths his Food, without any apparent Disorder, the Balls

No.

No. 219, will generally restore his appetite, 220 and 221, are other Compositions for the same purpose.

The Sallenders are almost synonymous with the Mallenders, as I thought I had not been sufficiently copious under that head I have added a few more Receipts here.

After hard Exercise or acute Disease, if a Horse should not regain his strength so fast as expected, the Balls No. 227 and 228, are very good remedies, and will restore him speedily.

The Medicines which follow for the Canker, are for the Feet or Mouth, No. 229, 230, 233, and 234, are for the Feet, to be applied twice a day. No. 251 and 252, are for the Mouth, and should be used three or four times a day.

O

Horses

Horses being very subject to Inflammations in the Eyes, these Ointments are very useful, No. 237, is Sir Han Sloane's famous Ointment, but it does not appear to me to be more efficacious than the rest.

Fomentations are very serviceable in all Tumours and Swelling, that do not shew signs of suppuration, but wherever they do, it should be encouraged.

The Drinks which follow, are calculated to be given for different Complaints, instead of Balls, where there is any reason for preferring the former. No. 243 is an Alterative Drink, and should be continued for a month or more. No. 244 and 245, are Diuretic Drinks—246 is a Purging one—247, 248, 252, 255, are Restraining Drinks and very serviceable after a strong dose

of Physic, Scouring, &c. No. 249, 256, 257, 259, 280, 261, and 262, are all good in Coughs, Colds, and after hard work—250, and 251 are gentle Purgatives—253 is an excellent Alterative Drink in all Foulness of the Blood and Juices—No. 254 and 256, are Stomachic Drinks, useful in Loss of Appetite and Weakness of Digestion; the rest are all Drinks used in Fevers—265 is particularly good when the head seems much affected.

The Embrocations are of service in slight Bruises and Strains. They should be well rub'd in with the hand three or four times a day.

Consumption, properly so called, is a Disorder so seldom curable, that it would be useless to order Medicines for it; the partial wasting of the Flesh,

which generally goes under that name, will be remedied by these Medicines.

The Balls for fore Throats, are to be given two or three times a day.

The Worm Balls are gentle, and may be used without taking a Horse off his Work,
